# DOYMA Sealing systems for pipes and cables

Sustainable construction

# Sustainable construction

Sustainability in construction refers to the efforts made by manufacturers, building owners and building users to use resources, and deal with the environment, in a responsible way.

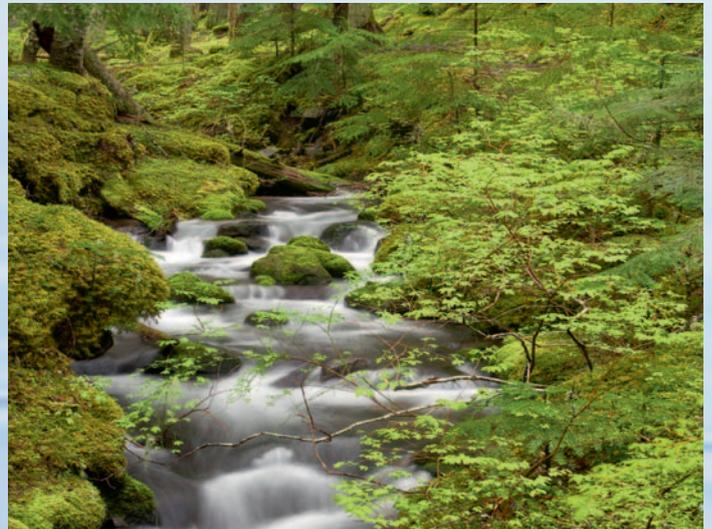

The scarceness of resources is plain to see for everyone who takes note of the climate change and the discussions about CO<sub>2</sub>-footprints. This pushes up the interest in, and demand for, environment-

friendly and sustainable construction products.

In this context, sustainability is not a new subject for DOYMA. Responsibility for high-quality products and for the people who produce these products is already part of our company philosophy. The company's commitment to supply high quality products and to the people who produce them is absolute.

## Using resources sparingly

Through the extreme durability of our products we are making sure that important raw materials and natural resources are not used up unnecessarily. For years, our company has been recycling all usable raw materials and returning them into the material cycle. In this way, DOYMA makes a sustainable contribution to lowering the demand for primary materials.

## Protecting values

DOYMA products are used to seal pipe and cable penetrations through external perimeter and partition walls. This ensures that walls and ceilings remain dry. Ground moisture and pressing/non-pressing water cannot penetrate into buildings, so that equipment, machines, computers or cultural assets are protected against damage.

People appreciate living and working in buildings that are comfortable and free from leaks. Such buildings are a prerequisite for an agreeable atmosphere, which provides greatly improved and efficient creature comfort. And the value of the building itself is sustainably enhanced by the visual and subjective appearance created by a neat and leak-proof wall penetration detail.

## Acting with social responsibility

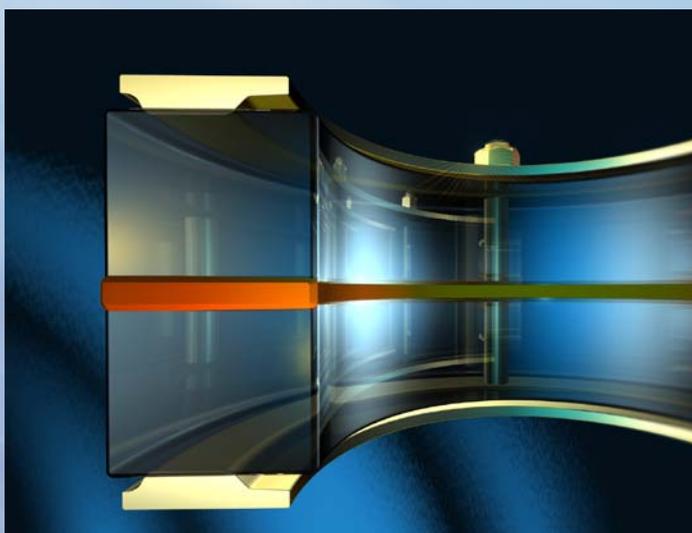

For DOYMA, sustainable action also means that we take care of the people who design, build and distribute our products: the people at Doyma. They are better able to carry out their respective tasks to a high quality standard when they work in a safe and harmonious working environment.

We have created the optimum conditions for our staff so that they feel comfortable and at ease with us.

The effects of this can be seen in the extremely high staff retention rate. Whenever a colleague has a problem outside the workplace, we always try to find a practical solution in order to accommodate work requirements with personal needs and wishes.

## Thinking economically

Thriftness is always in demand. However, the cheapest solutions for new construction and refurbishment projects are almost always the most expensive ones in the long run. Short life cycles, defects and increased maintenance costs can quickly turn the cheap product into a prime cause for additional costs. From the outset, DOYMA has eschewed the option to throw 'cheap', low-quality products on to the market. And the market has understood: quality has its value – and its value deserves the price.

## Optimising products

Even good products can still be improved. In many cases the optimised products will also lead to an improvement in the environmental balance. For example the introduction of our DPS system for gaskets inserts has drastically reduced the number of different models needed. It is now possible, with just one type of gasket insert, to seal many more different pipe diameters than before. This results in a significant reduction of storage space requirements, of the frequency of goods transport journeys and of the energy needed for production and logistics.

# DOYMA GmbH & Co

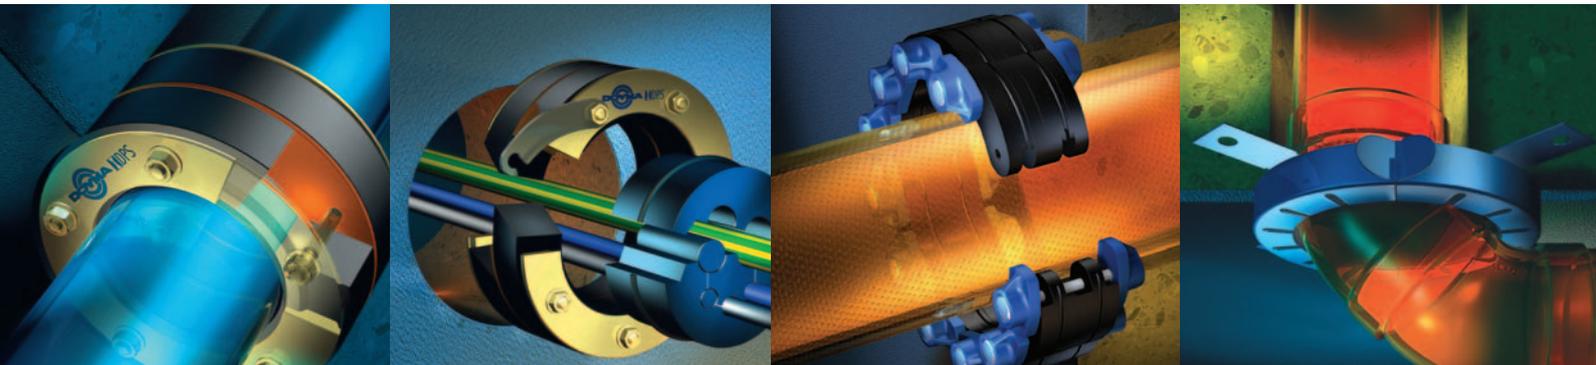

We are the sealing systems specialists for pipes, cables and ducts running through walls, ceilings and floors.

With its headquarters in Oyten near Bremen and branches in the UK and offices all over Europe, our company employs about 120 people in the production, development and sales of our products, both at our company offices and in the field. Continual training of our employees, dialogue with our partners and a constant eye on potential market problems ensure that our brand receives the best possible support - both nationally and internationally.

A twenty-five-year warranty, innovative product development, targeted involvement in construction projects, trained sales teams offering expert advice are just some of the services we provide.

This ensures our superiority in the provision of systems and makes us unbeatable down to the very last detail.

Add to this client loyalty and competitive prices, and you have the ideal foundations for a successful partnership. A presence at leading national and international trade fairs, and the provision of specialist seminars and product training sessions for our partners secures our pre-eminence in the field of sealing systems for service ducts.
